

GTW Task : Blog Management System

Objective:

Build a full-stack Blog Management Application using React (frontend) and Node.js + Express (backend).

The assignment evaluates understanding of CRUD operations, nested comments, debounced search, authentication, and clean architecture.

Core Features (Mandatory)

Frontend (React)

1. Blog List Page

- Display all blogs with:
 - Title
 - Short description
 - Author name
 - Created date
- Implement pagination (client or server side)

2. Blog Search

- Search blogs by title

3. Blog Details Page

- Show full blog content
- Author details

- Nested comments section

4. Nested Comments (Recursive Rendering)

- Each comment should support replies
- Infinite nesting allowed
- Reply button under each comment

5. Add Comment / Reply

- Add new comment
- Reply to any comment
- Replies should appear as child comments

6. Blog CRUD Operations

- Create blog
- Edit blog
- Delete blog
- Required fields: title, content
- Optional: tags
- Proper validation required

Backend (Node.js + Express)

Authentication & Authorization

- Only logged-in users can:
 - Create blogs
 - Add comments

- Only author can edit/delete their blog
- Protected routes using JWT token

Bonus Features (Optional but High Scoring)

- Like / Unlike blog feature
- Filter blogs by tags
- Rich text editor for blog content
- Dark mode toggle
- Infinite scroll instead of pagination

Evaluation Criteria

Architecture:

- Proper folder structure
- Reusable components and hooks
- Separation of concerns
- API failure fallback

Security:

- JWT token handling
- Protected routes
- Authorization logic
